Quickload™

User Quotes...

"I was extremely happy with *Quickload*. It reduced our time to upgrade our system from 6 months to just over 1 month!

Before *Quickload*, it took about 1 month to load up the operating system, another 1-2 months for corrections, adjustments & tuning, and then 3 months to perform the migration. With *Quickload*, it took us 2 days to load the operating system and 1 month to perform the migration.

In addition, *Quickload* provides extra conveniences. For example, we were happy to see Unix Systems Services, HTTP Server and SYSPLEX parameters all set up & ready to go. Our previous migration required us to do this setup ourselves.

In general, *Quickload* enabled us to perform the upgrade with a lot less heartache. There were no "crashes" or "kinks" that were a normal part of previous upgrades. This upgrade was "stable" and the new system was immediately "run-able."

Quickload was extremely easy to use and performed as advertised. I would highly recommend this product.

"With *Quickload*, all the operating system components were up & running in 2 days. This magnitude of efficiency was unheard of, as it normally took us over 2 months to perform the same function. DB2, which usually took 2-3 weeks, was up in 1 day. The same time savings was experienced for CICS, and in all cases, *Quickload* provided the latest releases of z/OS, TCP/IP, VTAM, CICS, Netview, DB2 and JES2.

The upgrade and migration process is very cost-effective and does not require a Sr. Systems Engineer at a high salary.

The Discovery Browser allowed us to review all Master Catalogs and User Catalogs in one environment, and then propagate the environment to a complete new LPAR. The new LPAR would have the same resources and configuration that would normally take 1-2 weeks of work to generate. When we needed to add, delete or customize the system, the information was at our fingertips.

The only concern was the fear of getting the job done too quickly — that someone's job might be in jeopardy. However, this efficiency is crucial in our shop and allowed us the ability to tend to our important day-to-day business problems.

"*Quickload* provides a preconfigured operating system on CDs that makes the installation process much easier and quicker than the standard service pack method. The preconfigured system was also more accurate and more reliable than building the system from scratch with service pack.

The design and structure of the *Quickload* process conveniently guides the systems programmer through a logical step-by-step flow.

Technical Support was very quick to respond and excellent in obtaining results. *Quickload* is a great product for the system programmer.

"We had a very good experience with *Quickload*. It did the job as advertised and was definitely easier than server pack.

Quickload is especially helpful to current system programmers who do not have the greatest systems expertise and to future generation system programmers who may not have the skill-set of our current systems staff.

I would definitely recommend this product.

"*Quickload* was easier to use than one would imagine. The CDs installed the new operating system very quickly and easily — and absolutely faster than server pack!

In fact, the advantage of CDs versus tapes was just the tip of the iceberg. *Quickload* provided much more (better tuning, stability, software setup, etc.) delivering a tight, clean system as promised.

Support was EXCELLENT — readily available & highly technical. Your staff presented itself as working WITH us during this process rather then FOR us.

I highly recommend this product!!
